Orthograph Floor Plan Survey System

OrthoGraph is a floor plan survey and creation system built up from a CAD app running on the iPad and a respective group of cloud services.

OrthoGraph is the most advanced AEC CAD App running on iPad.

Advance the level of your professionalism

Our User's favourite features:

Sketch & Tap

Draw like you would do with a pencil on a paper. OrthoGraph recognizes it and creates a floor plan from your drawing. Add new rooms simply by drawing the new walls. Create your multi-story document assisted with your iPad.

Measure

Enter distances or use your laser distance meter, the drawing updates instantly. Corners and their angles are reflecting the measurements, doors, windows move to their proper position with measured sizes.

Cloud Storage

And last but not least use OrthoGraph Cloud to backup your work with versioning and use the also unexampled teamwork function that allows many people to work in the same floor plan.

Document

Add objects, cameras with their properties, store images made with the camera of your iPad. All building documentation will be stored in one place, in our professional BIM model.

Reports and calculations

Every important calculation is in your hand. Get painting area, make floor plans or 3D renders for selling or get the PDF room book directly on site.

CAD compatibility

OrthoGraph writes DXF and IFC directly from the iPad containing every BIM information. The native CAD converters (like the ArchiCAD Import Module) provide even more. Get walls with doors and windows in them, 3D objects with measured properties in a multi-story building model.

Export your work

When you are ready with your work, export the files in one of the professional output file formats like IFC, DXF, JPG and use them further in ArchiCAD, AutoCAD or in Solibri Model viewer. You can also export your project as a PDF room book. It will list all your rooms and objects individually with their drawings, and if you wish, include camera renders too.
